

Glatzkopf Floor  
INGO MAURER UND TEAM 2017

Metal, cardboard, glass. Glatzkopf is based on a long-lasting lighting concept: a lampshade sits on a large glass bulb, which is fixed in the base plate via the frame and the rod. The lampshade, due to its asymmetrical form, is reminiscent of a cap and gives the fixture a certain dynamism. In the base plate are three holes, which allow the rod to be adjusted at different angles. The length of the rod can be adjusted. The paper screen makes the light bulb visible through the hole. The light bulb itself is sandblasted on the top and is equipped with LED strings.

#### Light source

With semifrosted LED bulb, 6 W, 600 lm, 2700 K, 15000 h, CRI 85, EEC A+. Socket E27, max. 30 watts. Compatible with bulbs of the energy classes A++ - A. Only use Globe bulbs with max. 30 watts!

#### Technical data

For 220 - 240V

#### More info
